

PROJECT REFERENCE

Machine Applied Render – Baan Sansran, Hua Hin

The external rendering and installation of floor screeding was considered to be of critical programming importance to the main contractor on this condominium development in Hua Hin.

Hammersmith's proposal to use render spraying and screed pumping systems was accepted and team of 25 operatives using two Putzmeister P13 and one Putzmeister EV5 pump were able to provide sufficient finished render and screed areas for the main contractor to fully employ a crew of over 120 tile and floor finish installers.

The use of innovative, high production systems in a traditionally labour intensive operation brought real time and cost savings to this project.
